

Seattle Electric Vehicle Association

“Education, demonstration, proliferation”

The Seattle Electric Vehicle Association is a non-profit, all-volunteer association of electric vehicle enthusiasts. Our mission is to promote the widespread adoption of electric vehicles through education, demonstration, and advocacy. SEVA is a registered 501(c)3 and donations are tax-deductible.

Come to a monthly meeting!
Second Tuesdays
7:00 p.m.
4401 NE 2nd Ave., Wallingford
Join us for car shows and events!

While SEVA meetings are open for free to the public, we value your membership. Your \$40 per year supports SEVA and includes a subscription to the national Electric Auto Association’s monthly magazine, *Current Events*.

Whether you want to build your own electric vehicle, or just need reliable, efficient transportation, electric vehicles are for everyone. Join us at car shows, special events, monthly meetings, or online, and discover what driving electric can do for you!

WHY DRIVE ELECTRIC?

1. **Save Money.** Take advantage of tax credits, and spend much less on fuel and maintenance costs. Energy costs in Washington State make it possible to drive electric for about 2 cents per mile.
2. **Convenience.** Start every morning with a full battery after charging your car while you sleep. It's like having a gas station in your garage and filling your tank every day.
3. **Simplicity.** Electric vehicles have about 70 percent fewer moving parts, motors that don't need maintenance, and batteries typically warranted for eight years or more.
4. **Support the local economy.** Electricity is produced locally and electric vehicle infrastructure is installed locally, creating jobs and economic investment in Washington State.
5. **Protect the environment.** Electric vehicles do not emit pollutants or carbon or drip toxins that pollute our waterways. Electricity in Washington is produced mostly by clean, renewable sources such as hydropower, wind and solar, which do not create smog or contribute to global warming.
6. **It's fun!** With no transmission and full power available instantly, electric cars are more responsive with great handling characteristics. They are fun to drive!

*CONVERTING A GAS CAR TO ELECTRIC IS
THE HIGHEST FORM OF RECYCLING*
